

# Choose Your Top

**UltraTop:** Formed from one piece with a curved (no drip) front nose, a 1/4" cover radius and curved backsplash.

**DuraTop:** The same one-piece construction with square-edged nose and backsplash.

**DiamondTop\*:** The ultimate in precision with contrasting leveled nose and backsplash.

*Special Order Only*

36" island bar top

# Here's How to Measure for Your H-K Tops

Sketch in your cabinet arrangement on the grid at the right. This will help you double-check your measuring and requirements. Start with the rough shape. Then it is easy to decide counter lengths, depths and end finishes.

**1. How to decide depth.** A standard kitchen base cabinet is 24" deep. A standard 25" top will give about 1" of overhang at the front. (That's both practical and handsome.) The 25" top also has a right-angled backsplash that protects the wall 3 3/4" above the counter.

For an island top (not against a wall), you want that 1" overhang on each side (and no right-angled backsplash); so specify a 26" (island) top. If you have an island and want seating at the counter, specify a 36" top. That gives you 1" overhang on one side and about 11" on the other for knee space.

A standard vanity is 21" deep; use a 22 1/2" top.

**2. Mark the length** of each counter in the diagrams shown on the back of this folder. Be sure to mark depth of each "leg" so we know whether it's a standard or island top.

**3. Mark the "cutouts"** you need. Diagram the location dimensions of sinks or other cutouts (like a cooktop) in the diagrams provided, then list the full dimensions of these drop-in units on the order form.

**4. Mark the end "finish"**. Wherever a counter is cut to length, you need a finish piece applied. Mark in ES for end splash (see drawing below) or EC for end cap.
